

We have a comprehensive range of floor saws to suit all our customer needs which are available to cut -

Flint Concrete, R/C Concrete,

Limestone Concrete and Asphalt.

These include small and large diesel/petrol and electrically powered machines. The diesel/petrol driven machines allow for a cutting depth of up to 650mm.

This is the usual method for cutting roads, whether asphalt or concrete, warehouse floors, runways and expansion joints.

Electric saws can be used as an alternative to diesel units where restrictions apply; for

instance in warehouses where food is stored or prepared.

Electric saws can cut to a depth of 500mm.
